## Kven

The letter ⟨Ḑ⟩, which is not used in standard Finnish, became used in Kven language texts in the early 2020s, with its users as of March 2025 including the Norwegian Directorate for Civil Protection (e.g. *Omavalmmhiuđen tarkistuslista*),<sup>[4]</sup> NRK (e.g. *Pienemät piđot Hortenissa*),<sup>[5]</sup> and Kainun Institutti (e.g. *Sillä heidän kieli oon muuttunu omhaan laihiin.*).<sup>[6]</sup>

- Δ δ
- D
- D d
- **Ḑ ḑ**

**Transliterations** Ḑ ḑ · Ḓ ḓ · Dj dj · Ḑ ḑ · D` d`

## Latin

⟨Ḑ⟩ was used in Medieval Latin to mark abbreviations of words containing the letter *d*. For example, *hḑum* could stand for *heredum* "of the heirs". Similar crossbars were added to other letters to form abbreviations.<sup>[7]</sup>

## South Slavic languages

⟨Ḑ⟩ is used to write the voiced alveolo-palatal affricate, [dʒ], similar to the ⟨j⟩ in "jam".<sup>[8]</sup>

⟨Ḑ⟩ was introduced by the Serbian philologist Đuro Daničić in 1878 for use in Serbo-Croatian in his *Dictionary of the Croatian or Serbian Language*, replacing the older digraphs ⟨dj⟩ and ⟨gj⟩.<sup>[8]</sup> Daničić modeled the letter after the Icelandic and Anglo-Saxon letter *eth*, albeit representing a different sound. In 1892 it was officially introduced in Croatian and Slavonian schools (in the Habsburg Kingdom of Croatia-Slavonia where the Croatian language was official) and so definitively added to Gaj's Latin alphabet.<sup>[8]</sup> The letter thereafter gradually entered daily use,<sup>[8]</sup> spreading throughout Serbo-Croatian and then to Macedonian (its Latin transliterations are heavily influenced by Serbo-Croatian from the Yugoslav period).

⟨Ḑ⟩ is today considered a distinct letter, and is placed between Dž and E in alphabetical order. Its Cyrillic equivalent is Ђ ђ.<sup>[8]</sup> Its partial equivalent in Macedonian is Ѓ ѓ (because only some dialects contain the /dʒ/ sound). When a true ⟨ḑ⟩ is not available or desired, it is transcribed as ⟨dj⟩ in modern Serbo-Croatian, and as ⟨gj⟩ in Macedonian. The use of ⟨dj⟩ in place of ⟨ḑ⟩ used to be more common in Serbo-Croatian texts, but it is falling out of practice.

## Sámi languages

In the present-day orthographies of Northern Sámi, Inari Sámi and Skolt Sámi, ⟨ḑ⟩ represents the fricative [ḑ]. It is considered a distinct letter and placed between D and E in alphabetical order.

A 9th century Latin manuscript.  
The abbreviation *lcdo*  
(*secundo*, "second") occurs on  
the third line.

## Vietnamese

In the Vietnamese alphabet, ⟨Ð⟩ represents a voiced alveolar implosive (/ɗ/) or, according to Thompson (1959), a preglottalized voiced alveolar stop (/ʔɗ/).<sup>[9]</sup> An unadorned ⟨D⟩ in Vietnamese represents either /z/ (Hanoian) or /j/ (Saigonese).

⟨Đ⟩ is the seventh letter of the Vietnamese alphabet, after ⟨D⟩ and before ⟨E⟩.<sup>[10]</sup> Traditionally, digraphs and trigraphs like ⟨CH⟩ and ⟨NGH⟩ were considered letters as well, making ⟨Đ⟩ the eighth letter.<sup>[11]</sup> ⟨Đ⟩ is a letter in its own right, rather than a ligature or letter-diacritic combination; therefore, *đá* would come after *dù* in any alphabetical listing.

The Vietnamese alphabet was formally described for the first time in the 17th-century text *Manuductio ad Linguam Tunckinensem*, attributed to a Portuguese Jesuit missionary, possibly Francisco de Pina<sup>[12]</sup> or Filipe Sabin.<sup>[13]</sup> This passage about the letter Đ was later incorporated into Alexandre de Rhodes' seminal *Dictionarium Annamiticum Lusitanum et Latinum*.<sup>[14]</sup>

Another letter written with the symbol đ is completely different than our own and is pronounced by raising the tip of the tongue to the palate of the mouth, immediately removing it, without in any way touching the teeth, for example *đā đā*: partridge. And this letter is very commonly used at the beginning of a word.

—*Manuductio ad Linguam Tunckinensem*<sup>[note 1]</sup>

On older typewriters,  was located where  would be in the French AZERTY layout.<sup>[16]</sup> Alternatively, a hyphen can be overstruck onto a D.

On computers without support for a Vietnamese character set or Unicode, ⟨Đ⟩ is encoded as DD and ⟨đ⟩ as dd according to the Vietnamese Quoted-Readable standard. Vietnamese computer users typically input ⟨Đ⟩ as   in the Telex and VIQR input methods or as   in the VNI input method. In the absence of an input method, the TCVN 6064:1995 and Microsoft Windows Vietnamese keyboard layouts map ZA0-09 ( on a U.S. keyboard) to ⟨đ⟩, or ⟨Đ⟩ when holding down . The Windows layout also maps ZA0-11 () to đ.

Other modes of communication also have dedicated representations of ⟨Đ⟩. In Vietnamese Braille, it is ⠋, which corresponds to ⟨D⟩ in French Braille. In the Vietnamese manual alphabet, ⟨Đ⟩ is produced by touching the thumb to the index finger. In Morse code, it is rendered – · · – · ·, corresponding to Telex's "DD".<sup>[17]</sup>

A page from the **d** section of de Rhodes's *Dictionarium Annamiticum*, a 1651 Vietnamese-Portuguese-Latin dictionary. As with the B with flourish, ⟨Đ⟩ only appears in lowercase in de Rhodes's works.

# Spanish

The Spanish language used ⟨Ð⟩ as a ligature of the word *de* ('of'). It is rarely typed, but it was commonly used on signs and in handwritten text, especially in Old Spanish.

Sign with the letter Ð, in Oaxaca, Mexico

Spanish letter Ð, in the font Coruña

Spanish letter Ð used on the Coat of Arms of the State of Chihuahua Mexico.

## Other uses

### Phonetic transcription

The lowercase *ḏ* is used in some phonetic transcription schemes to represent a voiced dental fricative [ð] (English *th* in **this**). Eth (ð) is more commonly used for this purpose, but the crossed *d* has the advantage of being able to be typed on a standard typewriter, by overlaying a hyphen over a *d*.<sup>[18]</sup>

|             |           |          |           |
|-------------|-----------|----------|-----------|
| Prim. Germ. | ḥ         | ḏ        | ȝ         |
| Goth.       | ḥ, ḥ (f)  | d, ḏ (p) | ȝ, g      |
| OE.         | ḥ, ḥ (f)  | d, ḏ     | ȝ, g      |
| R. Franc.   | ḥ, ḥ      | d (f)    | g         |
| E. Franc.   | ḥ, ḥ      | t        | g         |
| UG.         | p (b) b p | t        | k g g (k) |

An example of **ḏ** being used for a voiced dental fricative in the phonetic transcription of early Germanic languages, alongside **ḥ** for bilabial and **ȝ** for velar, from Joseph Wright's *Old High German Primer* (1906).

### Currency symbols

A minuscule form of the letter, *₫*, is the symbol of the đồng, the currency of Vietnam, by a 1953 decree by Hồ Chí Minh.<sup>[19]</sup> The South Vietnamese đồng, on the other hand, was symbolized "Đ.", in majuscule. In Unicode, the Vietnamese đồng symbol is properly represented by U+20AB **₫** DONG SIGN, but U+0111 **đ** LATIN SMALL LETTER D WITH STROKE is often used instead. In Vietnamese, the đồng sign is written after the amount in superscript, often underlined.

The uppercase form, Ð, is used as the currency symbol for the cryptocurrency Dogecoin.

# Chemistry

Dispersity is represented by the symbol Đ, and is a measure of the heterogeneity of sizes of molecules or particles in a mixture, referring to either molecular mass or degree of polymerization.

## Disambiguation

In Japanese handwriting, the letter D may be written as Đ to clearly distinguish it from the letter O or the digit 0. This is similar to writing Z or 7 with a bar to distinguish them from 2 and 1 respectively.

| <u>PostScript</u>                           | Dcroat, Dslash                     |         | dcroat, dmacron                  |         |
| <u>LaTeX</u>                                | \DJ                                |         | \dj                              |         |

In Unicode, both crossed *d* and barred *d* are considered glyph variants of U+0111.<sup>[1]</sup>

Unicode has a distinct code point for the visually very similar capital eth, Đ, U+00D0, which can lead to confusion.

As part of WGL4, Đ and đ can be expected to display correctly even on older Windows systems.
